

Course Title: PL-7002 Create and Manage Automated Processes by using Power Automate	Course Duration: 1.0 Day
Exam: Not Included	Exam Type: Proctored Exam
Qualification: Microsoft Certified: Power Platform App Maker Skills	

Course Syllabus

Get started with Power Automate

- Introducing Power Automate
- Create your first flow
- Troubleshoot flows

Build approval flows with Power Automate

- Provide solutions to real-world scenarios.

Build flows to manage user information Power Automate's deep integration across multiple data sources Guided Project - Create and manage automated processes with Power Automate

Course Overview

This course teaches learners how to automate business processes using Power Automate. Participants will gain practical experience in creating automated workflows, connecting multiple applications, implementing approval processes, and monitoring and managing flows effectively.

Course Learning Outcomes

By the end of this course, learners will be able to design, implement, and manage automated workflows using Power Automate, connect apps and services to streamline processes, configure approvals and notifications, handle errors and exceptions in flows, and monitor workflow performance. These skills enable learners to improve operational efficiency, reduce manual tasks, and create reliable automation solutions that support business objectives.

Audience

Business analysts, app makers, IT professionals, process owners, and anyone responsible for automating business workflows using Microsoft Power Automate

Entry-Level Requirements

Basic knowledge of Microsoft Power Platform and familiarity with Office 365 applications

Recommended Reading

Microsoft Docs: Power Automate Documentation

What's Included

Instructor-led sessions, course slides

Exam Information

This course supports preparation for **Power Platform App Maker certification exams**, which assess the ability to design, implement, and manage automated workflows, integrate multiple services, and deliver functional automation solutions. The exam includes scenario-based, multiple-choice, and practical exercises to validate real-world skills in Power Automate.

What's Next

After this course, learners can explore advanced workflow automation, integrate AI Builder into automated processes, or combine flows with Power Apps for enterprise-scale automation solutions.

Additional Information

Get started with Power Automate by create and manage automated processes with Power Automate. Including creating triggers for cloud flows, configuring actions, implementing conditional logic for a cloud flow, testing a cloud flow, creating and configuring approvals by using Power Automate, and sharing cloud flows.
