- How do mobile users use their devices and content? Benefits and pitfalls
- Policy Setting – security policies for content, users and mobile devices

IT Asset Management (ITAM) Key Findings & Conclusions:

- The best practices in the ITAM framework
- How to assess and understand the ITAM maturity in your organisation
- The interface between the four key ITAM areas (HAM, SAM, SEAM, PINAM)
- Effective communication of your ITAM goals to the key stakeholders in your organisation
- ITAM integration with the organisational key business drivers and goals evaluation
- Exam preparation
- IT Asset Management (ITAM) Exam

Course Overview

Our IT Asset Management (ITAM) Foundation online training course will introduce you to the concept of IT Asset Management. It's the perfect training course for anyone new to IT Asset Management (ITAM).

Our IT Asset Management (ITAM) Foundation online training course will focus on expanding organisational workflow. This happens by defining the key roles within the IT Asset Management (ITAM) disciplines across financial, contractual, and inventory departments while highlighting the culture changes that ensue for end-users in an IT environment.

Course Learning Outcomes

Our IT Asset Management (ITAM) Foundation online training course will teach you about the four key ITAM areas and their interaction in relation to contract management, compliance, information security, cost control and IT business value:

- Hardware Asset Management (including Mobile devices)
- Software Asset Management
- Services & Cloud Asset Management
- People and Information Asset Management (including Bring Your Own Device)

Audience

Our IT Asset Management (ITAM) Foundation online training course is intended for all key personnel in the organisation involved in the IT lifecycle. Whilst this certification has an IT focus, it has been specifically designed for non-IT personnel in mind. Specific roles/responsibilities could include (but are not limited to):

- Overall Management
- IT Manager
- Procurement Manager
- Financial Manager
- IT Operations Manager
- Project Manager
- Process Manager
- Contract Manager
- Risk Manager
- Business Continuity Manager
- Security Manager

Entry-Level Requirements

There are no entry-level requirements for our IT Asset Management (ITAM) Foundation online training course.

Recommended Reading

There is no recommended reading associated with our IT Asset Management (ITAM) Foundation online training course.

What's Included

Our IT Asset Management (ITAM) Foundation online training course includes the following:

- Audio Transcription
- Quizzes
- Study Guides
- Sample Exam
- IT Asset Management (ITAM) Foundation Examination

Exam Information

IT Asset Management (ITAM) Foundation Examination:

- Duration: 60 Minutes
- Format: Multiple Choice
- Delivery: Online, Webcam Proctored
- Questions: 40 Questions

The IT Asset Management (ITAM) Foundation examination is an online proctored exam conducted by Van Haren.

What's Next

Our three-day Software Asset Management (SAM) Specialist training course is designed for IT professionals with some understanding of the IT Asset Management area. This may be beneficial to take prior to or after our IT Asset Management (ITAM) Foundation training course.

Our three-day Hardware Asset Manager (HAM) Specialist training course align IT Service Management best practices with HAM best practices. This will help your organisation to implement HAM lifecycle processes and show how IT Service Management can support HAM lifecycle to be in control and support the other Asset types.

Additional Information

IT Asset Management (ITAM) is one of the most important elements for any business strategy. IT Asset Management will improve your business' cost control and risk reduction while increasing business value with IT Assets. These IT Assets include all aspects of hardware and software used within your organisation.

You will walk away from this training course understanding the purpose of IT Asset Management (ITAM) and how it will benefit your organisation. This even includes licensing complexities related to IT operations in terms of software and hardware updates and acquisitions.
